

Camera D — deployed-corrected residual

Point area in (b) scales with detections in the cell. σ_{pix} is fitted on leave-region-out folds, so each cell's prediction is out-of-region. Ground truth positions the dots in (a) and measures the residual; it never enters a projection, Jacobian or covariance. The sampled ribbon in (a) is the binding limit of this dataset: the footprint is not covered in two dimensions, so range and the full Jacobian cannot be separated here.
