

Letting the filter work out its own camera noise makes it confidently wrong

smoke1_20260716, 539 detections from four cameras under retired v2. Camera C carries a historical 77 mm signed sideways residual — MECHANISM evidence, not current camera accuracy (under the current path all four sit within 64.6–68.1 mm; see docs/localization_metrics.md). Ground truth scores and draws — it never enters a model.
